Portfolio Brief Name: Gandharva C Kulkarni

Semester/Branch: 3rd Semester, B.Tech CSE

Bio: I am a 3rd-semester Computer Science and Engineering student passionate about software development and algorithmic problem-solving.

I am currently building my foundational skills in C, Python, and Git/GitHub.
Projects (Activities 1-4):

1. *Hello World:* My first version-controlled repository to understand the basics of Git, commits, and pushing to a remote server.
2. *Pair Programming:* A collaborative session where I used GitLens and VS Code Live Share to write code synchronously with a peer, managing merge conflicts and branch workflows.
3. *LeetCode Solutions:* A structured, documented repository tracking my problem-solving progress across data structures like arrays, strings, and linked lists, complete with time/space complexity analysis. Skills: C, Python, Git/GitHub, HTML/CSS, Data Structures & Algorithms. Goal: I am looking for a summer internship where I can apply my programming skills to a real-world codebase and learn from experienced backend engineers.

Prompt Log

- Prompt 1 (Initial): "Act as an expert web developer. Create a single-page personal portfolio blog in HTML and inline CSS based on this brief: [Inserted Brief]. It should have a modern, clean, dark-mode design with sections for About, Skills, Projects, and Contact. Include links to my GitHub projects."
    - *Note:* The AI generated a decent layout, but the About section was a massive block of text and it forgot to add actual placeholder URLs for my repositories.
- Prompt 2 (Refinement 1): "The About section is too long. Shorten it to exactly three sentences focusing on my major, my current learning focus, and my internship goal."

    - *Note:* The AI successfully condensed the text to be punchy and readable.
- Prompt 3 (Refinement 2): "Update the Projects section to include these exact links: 'https://github.com/gandharvak312/hello-world' and 'https://github.com/gandharvak312/leetcode-solutions'. Style these links to look like clickable buttons."
    - *Note:* The AI added the correct URLs and applied CSS padding and background colors to make them look like buttons.

Reflection: The follow-up prompt that produced the biggest improvement was asking the AI to style the raw text links into visual buttons, which immediately made the page look like a real portfolio. One thing the AI got wrong initially was inventing a lot of generic "filler" text for my bio that wasn't in my brief. I had to explicitly constrain it to three sentences to fix the hallucination.
